

# FortiAnalyzer

## Centralized Logging, Analysis, and Reporting

### Enhanced Visibility With FortiAnalyzer Platforms

FortiAnalyzer platforms integrate network logging, analysis, and reporting into a single system, delivering increased knowledge of security events throughout your network. They provide organizations of any size with centralized security event analysis, forensic research, reporting, content archiving, data mining, malicious file quarantining and vulnerability management. Centralized collection, correlation, and analysis of geographically and chronologically diverse security data from Fortinet appliances and third-party devices deliver a simplified, consolidated view of your security posture.

The FortiAnalyzer family minimizes the effort required to monitor and maintain acceptable use policies, as well as identify attack patterns to help you fine tune your policies. In addition, FortiAnalyzer platforms provide detailed data capture for forensic purposes to comply with policies regarding privacy and disclosure of information security breaches.

### Security Event Information Management

You can put time back in your day by deploying a FortiAnalyzer platform into your security infrastructure, creating a single view of your security events, archived content, and vulnerability assessments. FortiAnalyzer platforms accept a full range of data from Fortinet solutions, including traffic, event, virus, attack, content filtering, and email filtering data. It eliminates the need to manually search multiple log files or manually analyze multiple consoles when performing forensic analysis or network auditing. A FortiAnalyzer platform's central data archiving, file quarantine and vulnerability assessment further reduce the amount of time you need to spend managing the range of security activity in your enterprise or organization.

### Vulnerability Management

Fortinet offers an enhanced scanning capability that utilizes a dynamic signature dataset to detect devices on your network, catalog vulnerabilities, and recommend remediation. Additional capabilities include device discovery, mapping, asset definition and prioritization, and customized reporting. An optional Vulnerability Management subscription provides frequent updates developed by the FortiGuard Labs with up-to-date vulnerability scan data to keep abreast of current threats.

### The FortiAnalyzer Difference

A FortiAnalyzer platform delivers complete security oversight with granular graphical reporting. Its breadth of data collection functions eliminate blind spots in your security posture. Its unique forensic analysis tools provide you with the ability to discover, analyze, and mitigate threats before perimeter breach or data loss. The FortiAnalyzer system's forensic analysis tool enables detailed user activity reports, while the vulnerability management tool automatically discovers, inventories and assesses the security posture of servers and hosts within the network infrastructure.

FortiAnalyzer systems come with a one-year limited hardware warranty and 90-day limited software warranty.

Features	Benefits
<b>Network Event Correlation</b>	Allows IT administrators to more quickly identify and react to network security threats across the network.
<b>Streamlined Graphical Reports</b>	Provides network-wide reporting of events, activities and trends occurring on FortiGate® and third party devices.
<b>Scalable Performance and Capacity</b>	FortiAnalyzer family models support thousands of FortiGate and FortiClient™ agents.
<b>Centralized Logging of Multiple Record Types</b>	Including traffic activity, system events, viruses, attacks, Web filtering events, and messaging activity/data.
<b>Seamless Integration with the Fortinet Product Portfolio</b>	Tight integration maximizes performance and allows FortiAnalyzer resources to be managed from FortiGate or FortiManager™ user interfaces.
<b>Choice of Standalone, Collector or Analyzer mode</b>	Can be deployed as an individual unit or optimized for a specific operation (such as Store & Forward or Analytics)

## FortiAnalyzerOS provides the following features

### General System Functions

Profile-Based Administration  
Secure Web Based User Interface for Encrypted Communication & Authentication Between FortiAnalyzer Server and FortiGate Devices  
Mail Server Alert Output  
Connect / Sync FortiAnalyzer SNMP Traps  
Syslog Server Support  
RAID Configurations, Change / View RAID Level  
Support For Network Attached Storage (NAS)  
Launch Management Modules  
Launch Administration Console  
Configure Basic System Settings  
Online Help  
Add/Change/Delete a FortiGate Device  
View Device Groups  
View Blocked Devices  
View Alerts / Alert Events  
Alert Message Console  
View FortiManager Connection Status  
View System Information / Resources  
View Statistics  
View Operational History  
View Session Information  
Backup / Restore  
Restore Factory Default System Settings  
Format Log Disks  
Migrate data from FortiAnalyzer to another Per-ADOM Dashboard

### DLP Archive / Data Mining

All Functions of Log Analysis & Reporting with additional tools to detect and analyze data losses  
View by Traffic Type  
View Content Including: HTTP (Web URLs), FTP (Filenames), Email (Text), and Instant Messaging (Text)  
View Security Event Summaries  
View Traffic Summaries  
View Top Traffic Producers

### Network Analyzer

Real-Time Traffic Viewer  
Historical Traffic Viewer  
Customizable Traffic Analyzer Log  
Search Network Traffic Logs

### Log Analysis & Reporting

View/Search/Manage Logs  
Automatic Log Watch  
Profile-Based Reporting  
Over 450 Predefined Reports plus customization  
Example Reports Include:

- Viruses: Top Viruses Detected, Viruses Detected by Protocol
- Events: By Firewall, Overall Events Triggered, Security Events Triggered, & Events Triggered by Day of Week
- Mail Usage: Top Mail Users by Inbound and

Outbound Web Usage Reports

- Web Usage: Top Web Users, Top Blocked Sites, and Top Client, Attempts to Blocked Sites
- Bandwidth Usage: Top Bandwidth Users, Bandwidth by Day and by Hour, and Bandwidth Usage by Protocol Family
- Protocols: Top Protocols Used, Top FTP Users, & Top Telnet Users
- Wan-Opt log information

Log Aggregation to Centralized FortiAnalyzer  
FortiClient Specific Reports  
SQL Database Integration  
SQL support for all features – including alerts, dashboard widgets, log viewer, FortiClient, and FortiMail  
SQL Query / Schema tools

### Central Quarantine

Configure Quarantine Settings  
View Quarantined Files List  
Quarantine Release API  
Quarantine Summary by type of file, reason it was detected, first and last detected times, total unique quarantine files, and total number of detections for each type and reason

### Forensic Analysis

E-Discovery  
Track User Activities by Username, Email Address, or IM Name  
Supports FortiGuard Web Filtering Reports to Show Web Site Access And Blocked Web Sites Per User  
Configurable Report Parameters including: Profiles, Devices, Scope, Types, Format, Schedule and Output  
Customized Report Output  
Reports on Demand  
Report Browsing

### Log Browser And Real-Time Log Viewer

Web 2.0 Style, Real-Time Log Viewer  
Historical & Custom Log Views  
Log Filtering, Search, and Rolling  
View Web, Email and/or FTP Traffic  
View Instant Messaging and P2P Traffic  
Filter Traffic Summaries  
Device Summary  
Traffic Reports Including: Event (Admin Auditing), Viruses Detected, Attack (IPS Attacks), Web Content Filtering, Email Filtering, Content (Web, Email, IM)

### Vulnerability and Compliance Management Scanning

Basic set of vulnerability signatures included and updates available as optional subscription  
Detect vulnerabilities / recommend remediation Group/report by asset class  
CVE compatibility with search by CVE names  
PCI DSS scans and reports  
Compatibility with SQL log database and report engine  
Unified reporting for FortiGate scan and FortiAnalyzer scan results  
XML API to retrieve IPS Packet Log  
Log Forwarding in CEF Format  
ConnectWise Support  
TACACS+ and SNMPv3 Support

### Graphic Reporting

FortiAnalyzer systems empower the network or security administrator with the knowledge needed to secure their networks through a comprehensive suite of standard graphical reports and the total flexibility to customize custom reports. Network knowledge can be archived, filtered and mined for compliance or historical analysis purposes.

### Granular Information

The FortiAnalyzer User Interface (UI) enables administrators to drill deep within security log data to provide the granular level of reporting necessary to understand what is happening on your network. Historical or real-time views allow administrators to analyze log and content information, as well as network traffic. The advanced forensic analysis tools allow the administrator to track user activities to the content level.

### Real-Time Log Viewer

The ability to monitor network, traffic and user events in real-time or browse historical data for specific events provides powerful insight into network security threats, performance and user behavior.

### Supported Devices

- FortiGate Multi-Threat Security Systems
- FortiMail Messaging Security Systems
- FortiClient Endpoint Security Suite
- FortiWeb Web Application Security
- FortiManager Centralized Management
- Any Syslog-Compatible Device
